Summary

Adaptable and motivated Computer Science undergraduate with hands on experience in Software Engineering and a strong interest in Problem Solving. Quick to learn, passionate about innovation, and eager to contribute to real world projects in dynamic, tech driven environments.

Experience

NVISION (PVT) Ltd

DevSecOps Engineer - Intern

May 2025 – Nov 2025

Battaramulla,
Colombo

- Analyzed security reports for the Dialog AAA Project, identifying risks and strengthening system security.
- Configured Apache and .htaccess settings to restrict unauthorized read/write access on production server directories, enhancing overall system security.
- Enforced access controls via SELinux and promoted secure coding practices.
- Secured and optimized AWS S3 buckets, improving efficiency and reducing overhead.
- Implemented endpoint protection to mitigate threats and enhance reliability cost effectively.
- Analyzed VA and MBSS reports for the Dialog AAA-DR (Disaster Recovery) Project to enhance system resilience.
- Implemented ionCube encryption to secure PHP source code from unauthorized access.
- Implemented Deep Security Agent on RHEL production servers for malware protection and system hardening.

Technologies :- **Terraform, RedHat Enterprise Linux, Zabbix, Jenkins, Bit Bucket, AWS, Shell Scripting**

Education

Bachelor of Computer Science

University of Ruhuna

CGPA - 3.49

2022 – present

Matara, SL

Digital Marketing

Chartered Institute of Marketing

Level 3 (Hold)

Dec 2022

UK

Diploma in Information & Com. Technology

ESOFT Metro Campus

2019

Colombo, SL

Skills

Programming & Scripting

Languages

Java, Golang, Javascript, Python,
Bash, SQL

Frameworks & Libraries

Spring Boot, net/http, Express.js,
Flutter, React.js

Database Management Systems

MySQL, MongoDB

Operating Systems

Linux (Ubuntu, RHEL), MacOS

Cloud Services

Amazon Web Services (AWS)

DevOps & Cloud Automation Tools

Git/Git Hub, Docker, Github
Actions, Terraform

Projects

Clinic Document Management System

An innovative, hosted web platform that empowers patients to securely store, organize, and access all medical documents, prescriptions, diagnostic reports, and vaccination records. Designed as a future-ready universal health profile system, it enables QR-based access to summary health data, streamlines clinical visits, supports migration requirements, and can operate as a subscription based service for monetization.

Role :- Full Stack Developer (MERN)

- Built a web platform for patients to securely store, organize, and access medical documents, prescriptions, diagnostic reports, and vaccination history.
- Implemented JWT based authentication and user specific access to ensure secure and private document management.
- Enabled smart document processing, search, filter, and note-taking functionality, extracting key health metrics from uploaded images/PDFs to maintain an up-to-date personal health profile.

Technologies :- **Javascript (Express.js, React.js), Python (FastAPI, Pytesseract, pdf2image, re), MongoDB (Atlas), AWS S3, Hosting (Firebase, Vercel), JWT, Docker**

MosQguard – Final Year Project

Multi platform digital solution for efficient disease documenting, real-time reporting, and data driven analysis in the public health sector, enabling improved surveillance, decision making, and healthcare management

Role :- Mobile Application Developer, Backend Engineer, DevOps

- Developed a dual platform public health reporting system enabling real time disease alerts, citizen complaints and developed dashboard/UI components to support PHI/MOH response coordination
- Implemented automated CI/CD pipelines with GitHub Actions and AWS.
- Provided support for small scale deployments using AWS and Docker.

Technologies :- **Java (Spring Boot), Javascript (React.js, Express.js), MySQL, AWS (RDS, S3, EC2), GitHub Actions, Docker, Terraform**

Objects Detector for Warehouse Protection

A trained binary classification model to automatically identify and flag unsecured objects from CCTV footage.

Role :- Backend Engineer, AI Developer

- Built an object detection system to identify and tag hazardous objects in warehouse images using OpenCV and Ultralytics YOLO models.
- Integrated Label Studio for dataset annotation and streamlined the model training workflow.
- Designed and deployed modular FastAPI endpoints for image retrieval, analysis status tracking, and object metadata, ensuring seamless integration with external systems.

Technologies :- **Python (FastAPI, OpenCV), Lable Studio, Ultralytics**

Ceylona – E Commerce Mobile Application (Freelancing)

A mobile application enables users to buy and sell authentic Sri Lankan products, providing a trusted digital marketplace that promotes local craftsmanship and culture.

Role :- Full Stack Developer, Mobile Application Developer, DevOps

- Developed a mobile first ecommerce app with secure authentication using JWT
- Built a seller web application for managing products, sales, and customer real time feedbacks and ratings.
- Built real time communication features enhancing service lifecycle management using Socket.io and push notifications service using Firebase

Technologies :- **Javascript (Express.js, React.js), Flutter, Socket.io, JWT, RDS (MySQL), AWS (EC2, S3, AMI), Terraform, Firebase Cloud Messaging (FCM)**

Extracurricular Activities

INSURGEX 1.0

Project Chairperson

Jan 2024

Algorithm based Intra University Hackathon Organized by Department of Computer Science,

AIIESEC in Ruhuna

Team Leader

Feb 2024 – Aug 2024

Outgoing Global Talent (OGT)
